

CMS Review - Administrative Panel perspective

1. Custom Classifications
 - a. The option to associate the key for each custom classification was not found (e.g. AVC:Phuket)
2. On “admin” the Owner Travel Stories page is not working properly. One story was edited (“A new holiday...”) and when the 'Live view' was tried all the stories have the same title and description for some reason, then, when one story was clicked to read more about it nothing was displayed. Besides that, the reference between the summary displayed in <https://avc-cms-dev.kognitiv.com/en/owner-travel-stories/> is not consistent with the content when the user clicks on one specific story. E.g.

3. The top menu, and other static sections, could not be configurable/translated, at least, this option was not found inside the CMS

4. Home page modifications. Since this is a non-editable section, Could you provide us short guidance on where and how inside the project can we update it?

5. For the production environment, Could you set Angel and Julia as superadminstaff?
